INNOVATIVE TECHNOLOGY

SALMING X-FACTOR...

lates the product development idea that the shoe game. The presentation below shows how the athlete should be an extension of the foot, an exo skeleton achieve that focus with the X-Factor technologies. that wraps around the foot and creates stability and

The eye-catching X-Factor exterior design encapsu- comfort, enabling the athlete to focus 100% on the

X UPPER

ErgoHeelCup[™] To stabilize and fixate the heel, which is key to providing a great fit and comfort, we have developed a new anatomical Ergo Heel Cup that is slightly longer than the average heel cup

X-Design[™]

The unique asymmetrical X-factor design stabilizes the foot for lateral movements and reduces pressure at the MTP joints (Metatarsophalangeal joints). It is important to keep the foot stable medio-lateral, avoiding friction and side forces in the soft parts of the foot sole. specially underneath the forefoot. In order to fixate the forefoot without getting pressure at the MTPs we have developed a horseshoe shaped "Front foot lacing stabilizer" within the asymetrical X-Factor design.

X MID SOLE

$T.G.S.62/75^{\text{TM}}$ Torsion Guide System

The distance from heel to the ball of the foot (62% of the shoe) has been designed with extra stability, which ends in the so-called "ballet" line, a 75° angle. In front of the 75° line, we have equipped the X-Factor with greater flexibility to stimulate the foot's natural movements. TGS 62/75 takes all of the gait cycle criteria into consideration. At the same time, it softens the strains caused by friction during lateral movements. The shoe bends in exactly the right places, stimulating the foot's natural ateral and forward movements

Lateral Movement Stabilizer an especially designed light weight integrated dual torsion unit that supports the foot during fast and rregular lateral movements.

Rebound Foam Forefoot rebound energy foam

- RE35. 80% better rebound energy than a regular EVA midsole compound.

X OUTER SOLE

RollBar™

Increased radius on the inner side of the outer sole, facilitates rolling the foot inwards and toe push off. Reaching for that stop ball in squash or covering a shot in floorball is made easier with the RollBar™ technology.

SpinZone™

turns that are typical for indoor sports. The SpinZone design - applied in the forefoot area - makes it easier for the forefoot to twist and turn under pressure, avoiding stress on knees and joints.

Asymetrical lacing designed for added comfort and improved fit.

Cushioning Foam

Heel cushioning foam - C35, positioned at the heel centre, gives you 70% better shock absorption than a regular EVA midsole compound.

SpeedLite™

The SpeedLite™ midsole is a lightweight performance EVA compound with long lasting cushioning qualities.

The design of the outer sole meets the lateral movements, twists and
