

KickZone™ - is developed to provide an increased whip-effect meaning that the shaft when bent is kicking back faster and thereby hitting the ball with greater power - creating an increased ball speed.

TipCurve™ - is exactly what the name says - a curve at the tip end of the shaft creating an optimized angle towards the floor surface and the ball - resulting in harder shots without having to bend the blade heel part.

Xshaft™ - The X-shaft is a totally new shaft construction from Salming. It's design is slimmer than the regular curved shafts and it has an optimized KickZone area and a reduced TipCurve angle.

Quest1Xshaft™

Powered by KickZone™ and TipCurve™ technology

X-SHAFT KICKZONE TIPCURVE Junior Flex 30, Length 98 (87), 103 (92) cm

X-SHAFT KICKZONE TIPCURVE Flex 27, Length 107 (96), 111 (100) cm
